ABOUT OUR PARK

In last week's issue reference was made in our local columns to an agitation started by several local ladies to have some improvements made to our park this summer.

The Review is of the opinion that this could be very nicely accomplished by the council with very little cost to the town.

A little cultivation around the trees and the replacing of dead ones would be one big improvement. Keeping the grass cut and installing a few swings, teeter-totters and slides for the children would make of the park a suitable picnic ground for families to congregate and give their children an afternoon or evening's play in the open.

Such a play ground would be especially welcomed by those who are not fortunate enough to possess a car.

CANADIAN TITLES

The question of titles in Canada is again being discussed in many quarters. The canceling of titles was brought about in 1925 years ago in government influence and for political reasons. It was such a "equal" title or civil.

Little Leonard Hicks, the six year old son of Mr. and Mrs. T. A. Hicks met with a very painful accident while playing with a sharp pointed stick, last Sunday evening, as a result of which he may lose the sight of one eye. He has been taken to Calgary and placed under the care of Dr. Gunn.

The Business Men's Association of Winnipeg paid a visit to Redcliff last Monday, when they inspected the several industries here and expressed their pleasure and surprise at the remarkable showing of growth and industry made by the town.

WATER IN PLACE OF MEAL HELPS STOMACH
Stomach trouble is often helped by skipping one meal. Drink lots of water. Add a spoonful of Adlerika each morning to clean out poisons in stomach and bowels. Cecil T. Hall, Druggist.

Since the local Stampede Association has decided to add a number of amateur athletics events to this year's program it is now up to the local athletes to start training for the different events. Redcliff has always had some very good material along these lines and there is no reason why several of these prizes should not be kept here this year. Prospective entrants are reminded to look over the list of events and to start now to get in shape as we are assured there will be stiff opposition.

JUST FOR FUN

The Clerical Limerick

There was a good Canon of Durham,
Who swallowed a hook and a worm.
Said the Dean to the Bishop,
"I've brought a big fish up,
But I fear we may have to interm."

Dean Inge

Mother can well remember father's first kiss, but daughter can't even remember her first husband.

Time spent getting even would be better spent getting ahead.

Father of six bought a dachshund so all the children could pet it at once.

It pays to be nice to the people you meet on the way up, for they are the same people you meet on the way down.

A Miss is as good as her smile.

Redcliff Reminiscences

Taken From Our File of
May 29, 1914

Jack Dingwall, 24 years of age, an accountant for the Ornamental Iron Works, was drowned here on Sunday while bathing with several other young men in the Saskatchewan river near Galt Island.

A most interesting and amusing Cricket game was played here on Empire Day between two local teams, the Redcliff Canadians and the Redcliff Albions. The Albions won with 54 runs to the good. The players were: Canadians—E. Osbourne, H. Patterson, W. Smith, W. Tilliday, A. Womersley, Brotherton, Hughes and D. C. McKay.

Albions—Christford, McKay, H. Womersley, R. Moret, N. Andrews, Orton, Enderley, Maskell.

Domestic Work On Farms

Many Girls Might Find It Better Than Housework in City

Frequently, even in these times, there are positions offered in good homes to young women who will do household work, with comparatively few taken. In days gone by, the acceptance of a job in a factory was regarded as more or less degrading, "shop girls" were frequently spoken of with disparagement. The duties of the household were performed in the main by members of the family, which usually consisted of more than one or two members. Then factory unemployment became quite the usual thing, followed by positions as stenographers and bookkeepers, and more recently as nurses and members of the legal and medical professions. The latest avenue sought to be opened to educated young women in ordination to the ministry of the Christian bodies. All this has been followed by crowding for positions that are not sufficiently numerous to meet the demand, with thousands of cultured young people on relief here and in the United States, and with no prospect that the near future will bring employment for those qualified for such duties. On the other hand, "domestic service" fails to attract employment, and homes with sufficient remuneration to provide clothing and sufficient recreation are not even considered. How much better would be the lot of the idle town and city girl in the beautiful surroundings of a farm home than the existence many are seeking out, hoping that a position in an office will come their way. Our Women's Institute have done a great deal in illustrating conditions of farm life. They can add to what they have accomplished by showing to young women that domestic service is not a degrading nor drudgery, and that the good bread and butter of the home on the farm is not to be discarded for a prospective pay in overcrowded professions in towns and cities.

Good Old English Word

"Whoopie" Was Bawling Cry in London Four Centuries Ago

When your children say they are going to "make whoopee" you probably answer, "Must you use this horrible Americanism?" But "whoopie" is not American slang. It is a good old English word. Four hundred years ago it was the rallying cry of the London apprentices, when, after a gay evening, they ran riot in the streets and made life miserable for respectable citizens. Several dramatists used the word. One wrote the Virgin Martyr, written by Shakespeare's day, contains the word. "May, lady, for my part, I'll cry whoopie." Just how the word got to America is puzzling dictionary editors. But it resounded again in the Wild West where cowboys shrieked "whoopie" when they were rounding up their cattle. It was spread to the West by the first settlers. One of the West's first settlers heard the expression and added it to their vocabulary. They used it just as we cry, but when the cowboys heard them calling it they changed it to "make whoopee" and used it as a term meaning to enjoy oneself riotously. Finally, it reached the theatre world. The arrival of talents resulted in this good old English word being heard again, and coming back to our vocabulary. But it has lost its former meaning, for authorities say that the word cannot be used for a rowdy party. It can only describe a party at which both sexes are present.

Tonk No Chances

Motorist to inkeeper, who has charged an exorbitant price for staying, his car. "But, my good man, there surely must be some mistake. What's this 50c?"

Inkeeper: "Well, you see, sir, not 'aving 'ad a motor stop at my place, I didn't know exactly what to charge. But you was sayin' it was a 40 horse power, and I allow charges 20 per night for a horse."

Lowest In History

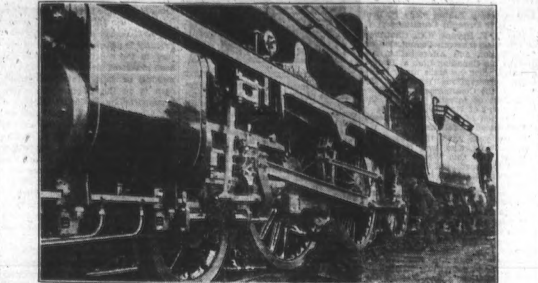

In the figures of registered deaths in Canada from tuberculosis for the year 1933, there is no evidence of any increase because of hard times. Dr. R. E. Macdonald, Ottawa, executive secretary of the Canadian Tuberculosis Society, said in Toronto. The death rate for the Dominion last year, he said, was lowest in history.

Lombardy Poplar Grows Quickly

Where a quick-growing windbreak is required the Lombardy poplar is one of the best trees to plant. It is very useful for hiding, in a short time, unsightly buildings and vacant lots.

W. N. O. 1964

SOUVENIR HUNTERS PLAY HAVOC WITH FAMOUS BRITISH TRAIN

If the engineers in charge of the famous British train, the Royal Scot, make many more stops before reaching the World Fair at Chicago, some ambitious souvenir hunters may steal the engine. While on exhibit at Ottawa "enthusiast" residents of the Capital carried off practically every movable article on view in the train, even the electric light bulbs. The train moved on to Toronto and again met with the same treatment, this time even the grease caps on the engine valvework. But the worst was yet to come, when, at Hamilton, the train had to leave the doors of the coaches and on the engine. Our picture shows the famous Royal Scot engine being painted specially for the trip to Chicago.

Value of Canadian Salmon

Research Shows Fish Very Rich in Necessary Vitamins

Canadian salmon are delicious and nourishing fish but there's an added reason why they make excellent food, and that is because their body oil is rich in vitamins essential to health. Vitamin "A" and Vitamin "D" both occur in salmon oil and the presence of Vitamin "D" is especially important since this vitamin is so valuable an agent in preventing and curing such ills as rickets.

Recent research has indicated that salmon oil is similar to recognized medicinal fish oils in vitamin potency and since the oil is mixed through the flesh of the fish, persons using salmon on the table will obtain from it the vitamin supply necessary to good health. So far as salmon in the canned form is concerned, the research has apparently not shown it to be very high in Vitamin "A" content, but rich in Vitamin "D." Certain fish liver oils, such as cod liver oil and halibut liver oil, of course, are also very rich in vitamins and hence their medicinal value.

The particular salmon research in question here was not conducted in Canada but the oil samples used were from salmon of the same varieties as occur in British Columbia waters where the fish are of high quality. At the present time some research as to the nutritive value of salmon is being carried on at the Prince Rupert Experimental Station of the Biological Bureau of Canada and it will doubtless bring out further interesting and important facts.

The investigation referred to in this article was carried out by members of the staff of the Federal Children's Bureau of the United States, who reported that they found salmon oil a very potent antirachitic agent. "Like cod liver oil," they said, "salmon oil, especially that from the more highly coloured species, has the advantage of providing Vitamin 'A' in addition to Vitamin 'D.' It also provides an apparently easily digested fat."

In the course of the research a clinical test was made with thirteen infants suffering from rickets. Only two of the children had previously received antirachitic treatment. The investigators reported that the test showed that "salmon oil is an antirachitic agent of considerable potency in the treatment of infantile rickets." Once initiated, "healing proceeded rapidly. Response to treatment was very prompt and no relapse lasting more than a few days was observed."

Ideal Range For Chick

Place Where Succulent Green Food and Shade Are Available

An ideal range for chicks is a flower field beside a corn field, or an orchard, where they can get all the succulent green feed they can eat and still have shade as required. Given those conditions, once the chicks go up range they can be reared with very little labor, dependence being placed mainly on hopper feeding. Plans for a satisfactory range hopper and other contrivances for poultry have been evolved by the Dominion Department of Agriculture.

Vocalist: "I'm going away to study singing."

Friend: "Good! How far away?"

A reputation for absolute honesty has pulled thousands of men through tough spots in life.

Different Motives For Song

Birds Do Not Always Warble For Sweet

The popular idea, no doubt fortified by poets, that when the singing bird pours forth its "strains of unpremeditated art" it does so out of sheer joy of life, is not believed by clear observers of bird life, according to a Manchester expert. He says bird songs may express many emotions. He has heard a "Wren-tit" that was being chased by a hawk scold with right and burst into song at intervals.

Blackbirds lighting will seldom chatter all the time and occasionally break into song. But there may be totally different motives for song. Many naturalists hold a theory that certain species of birds, like warblers, chadchads, wrens, and robins sang a definite territory, especially in the nesting season, and that with these species song is a proclamation that a territory has been taken and a warning to intruders to keep away. According to this "territory theory" the reason why the robin sings all the year through is that he holds a territory all the year through—he is always at home.

A Good Eye Exercise

Newspaper Reading Also Provides For Individual Sight Test

Newspaper reading is excellent exercise for the eyes, Harry L. Foug of Los Angeles told the Missouri Optometric Association at its annual convention in Kansas City.

Newspapers, Foug added, also provide for an individual to test his own eyes. Hold the paper in a good light, he said, about 18 inches from the eyes. If you can read it easily, your eyes are all right.

To make the test still more conclusive, move the paper quickly to about nine inches from the eyes. If you can still read it, there's absolutely nothing wrong with your vision.

Baron Wilhelm Elder von Sechen, German ambassador in Paris at the time of the declaration of the great war, died from heart disease at the age of 87.

The consumption of butter in Canada amounts to about 30 pounds per head per annum.

Renounce Age-Old Belief

B.C. Indians No Longer Keenon Wealth In Dogs And Purses

Having now given up the age-old belief that wealth and position in the world is indicated by the number of dogs and ponies they possess, aborigines of British Columbia have promised to assist authorities in ridding the interior of both scourges, according to Rev. A. H. Lett, of St. George's Indian school at Lytton, he said.

Because Indians reckoned their wealth in ponies and dogs, there is today a surplus of the animals in Interior British Columbia, Mr. Lett stated. They are destroying sheep and poultry, and are of no value. Fortunately the modern Indian sees this, and is helping to rid the reserves of the dogs and the ranges of wild horses, he said.

The Fountain of Youth

No One Needs Anything Better Than "Quality Of Imagination"

For the bright lexicon of youth, Professor Nash of New York University, has written a new definition of youth. It is measured by the "quality of imagination." One may live to 80 and yet die young. To be sure, "organic youth" ends at about the "rounding of age." But the "skill-building youth" may be extended far into maturity. Professor B. L. Thompson has long been telling of that we are never too late in taking up experience for adventure, for new experiences is an indication that age has not yet taken command of the mind. If one has within him a sufficient quantity of imagination, he need not look outside of himself for the fountain of youth.—New York Times.

Lady (engaging new maid): "And what denomination are you?"

Maid: "Well, mum, mother goes to the Baptist church, father to the Methodist, but speaking for myself I'm wireless."

People grow old by deserting their ideals, not by living for many years. Professor J. B. Nash of the New York University school of education, told the university's health conference.

Automobile taxes in Germany are to be reduced.

A Sharing Of Troubles

Harmony Between Employer and Employee During Difficult Times

One of the finest things that has developed during this period of depression has been the spirit of responsibility and sacrifice jointly shared by the employers and the employees.

The employer has seen profits vanish and losses increase and the matter of dividends became a memory.

The employee has had short time, and in some cases reduced hour rates, but with all this there has been no friction and no animosity.

The employee knows more of his employer's difficulties than he did previously. He has known by his own sight and reason that reductions were not put into effect except as a last resort, and records will show that the employer would have been much better off had he made those reductions a year or more earlier than he did.

This harmony between employer and employee has been one of the few bright spots that has prevailed in the dull condition of affairs of the past two or three years.—Graphic Art Bulletin.

The Benefit Of Laughter

Good Antidote For Many Misfortunes In Life

There is, apparently, a standing alternative between annoyance and amusement over life's ironical accidents, and he who lives best is he who laughs best for relief from the tears and tension of his own trials. It is a child's privilege to laugh because he is not the adult must learn to laugh in the face of misfortune, handicap and even pain or he becomes the unhappy slave of his own circumstances. It is such laughter it seems to be a definite therapeutic value. It has long been said that one may laugh his way out of his troubles, but it is more important for the modern man that he learn to laugh his way out of nervous prostration. Miss Mary F. Ferguson, supervisor of social service at Johns Hopkins University, advocates laughter as an antidote for all sorts of neuroses and even for social disorders.

Moscow Stages Demonstration

Russia's Military Power Passed In Review Before Million People

On May day in Moscow a million persons swarmed through the famous Red Square, saw a demonstration of Red Russia's military power. According to the Associated Press correspondent, besides the 20,000 and 50,000 troops of the Moscow garrison passed in review, with them armored cars, military aircraft, tanks, tanks. More than twenty huge tanks, painted a battleship grey and carrying three-inch guns in their turrets, were in the military equipment. In addition, 250 airplanes overhead, of the Soviet power in the air.

This is the Bolshevik Union. Some of our poets and poets have been railing against militarism in Canada, and never tiring of lauding the flower of the military in this Moscow spectacle. They might reflect, too, that this huge Red military machine is paid for by people who have no say about the paying, and what is more, cannot even know what they pay is spent.

Soviet Russia today is not nearly one of the world's greatest military powers. It is one of the world's greatest military dictatorships.

Robber Bees Active

Will Overpower Weak Colonies and Carry Honey Away

Although honey stealing is likely to be most troublesome in late summer, the bee-keeper has to keep in mind that robber bees may start their racket at any time. In warm weather, when there is little or no honey to be got from the flowers, the bees will easily yield to any temptation to obtain it. As soon as they are weak colonies, and carry the honey to their own hives. Old robber bees have a shiny appearance, the hair having become worn and they enter a many different hive. No colony should be allowed to grow weak, says the Dominion Apiarist, and as honey or syrup should be exposed in the apiary.

Less Written Of

That pension was paid in error to a woman for 48 years has just been disclosed in London by the British post office department. The woman, an employee, retired in November, 1885, on account of ill health, but failed to disclose that she was married that year. Neither was it revealed until after her death in February, 1931. The loss has been written off.

The Library of Congress is the largest in the world.

Gardening Notes

By Gordon Lindsay Smith

Beding flowers and vegetables in the hot bed or in the sun in a sunny window will be requiring some attention. After the second set of leaves has developed these things should be thinned out so that they have at least half an inch space each way. The soil between them should be stirred a little, and, of course, regular watering in warm days is required by lifting the window a few inches, gradually extending the process of airtight and time as the season advances. When the plants are a couple of inches high it is well to transplant at once into colder quarters where they should remain a couple of weeks, at least, before being put outside. Any space left in the hotbed may be planted with radishes, cress, lettuce and other short season crops and harvested directly from there.

Selection.—If the garden is a small one be satisfied with fewer varieties of flowers. It is much wiser to grow few plants each of ten varieties than many each of five. Plan for broad masses of color to create an impression of spaciousness. In other words, avoid making a botanical miscellany of the ordinary small garden. For the bulk of the planting, one is well advised to stick to such old favorites as Geraniums, Gallicas, Delphiniums, Hardy Perennials, Hardy Phloxes, Iris, Penstemon and Dianthus in the perennial bed, and Aster, Phlox, Pinks, Cosmos, Nasturtiums and Marigolds for immediate return. Avoid planting such things that are unsightly when the bloom is gone, unless the space will allow for placing annually to hide them.

Window Boxes.—It is now time to think about the window boxes which can be set out after danger of frost is over. One must remember that a window box is simply a very intensive form of gardening, producing about ten times the amount of flowers in the same area as in the ordinary garden. On account of this it is essential that the plants be of the best—containing plenty that it be kept dry. As they are not in the open, and are not in the open, they are not in the open.

World's Leading Newspaper

Mold Of Honor Has Been Given To London Times

The London Times was cited as the "leading newspaper of the world" by President Walter Williams of the University of Missouri School of Journalism. A medal of honor for "distinguished service in journalism" was accepted on behalf of The Times by Sir Wilfrid Lewis, its Washington correspondent.

He referred to the newspaper's "impartiality, its leanings, its courage, and its incorruptible English bones."

French vermouths and fruit juices for wine making cannot be shipped to the United States yet even though they contain no more than 3.3 per cent. alcohol.

IN TEARS WITH PAIN
OF RHEUMATISM

"For six weeks," a woman writes, "I had rheumatism, mostly in my feet and wrists. In fact, I have been in tears with the pain. Owing to stomach trouble, I could not take any kind of medicine, as it made me feel sick. So a lady friend introduced me to Kruschen salts. I am very thankful that I did so, for now I feel completely restored. I have not been taking anything else, as I would not be Kruschen salts has relieved me. Mrs. C."

The six mineral salts of Kruschen have a direct effect upon the whole bloodstream, neutralizing uric acid, which is the recognized cause of rheumatism. They also restore the eliminating organs to proper working order, and so prevent constipation, thereby checking the further formation of uric acid and other body poisons which undermine the health.

WORLD HAPPENINGS
BRIEFLY TOLD

Twelve feet high and weighing two tons, a statue of Christopher Columbus was shipped from Milan to America as the first of the series of statues to the Chicago World's Fair.

Publication of names of those in receipt of incomes of \$100,000 per year and more, will not be published by the U. S. House, Minister of Finance, told the House.

Power to raise by way of a loan an amount not exceeding \$10,000,000 will be sought by Hon. E. N. Rhodes, Minister of Finance, in a resolution of which notice has been given.

During the eight months of the present crop year ending with March, \$2,670,776 bushels of Canadian wheat have gone abroad via the Dominion House of Commons.

Petitions containing 400,000 names to protest against the proposed repeal of the House of Commons.

Yellow plague with white swiss dots, wool jersey, gingham checks, plume and hat trims are study material.

Style No. 447 is designed in sizes 2, 4 and 6 years. Stated 4 requires 1 1/2 yds. of 33-inch material for dress.

Price of pattern 20 cents in stamps or coin (coin is preferred). Wrap coin carefully.

Confirmed reduction in the six months on bank loans to a varying degree of applying the rate of interest with the individual banks, it was explained, each bank taking action on individual cases.

Huge Conversion Loan
Minister of Finance Acheson
For \$100,000,000 Issue

A huge refunding and conversion loan, amounting possibly to \$100,000,000 will be launched within the next few months, it was learned when a note of a resolution seeking parliamentary authority was given by Hon. E. N. Rhodes, Minister of Finance.

The resolution asks authority for an issue of a maximum of \$100,000,000 and it is understood the issue will be for a very large portion of the maximum.

The rate of interest will depend entirely upon the market at the time of the issue, which will be late in the summer, but it is expected the government will seek the lowest possible rate. The general belief is that the issue will be sold to yield slightly more than four per cent.

Easy For the Maid
Interpreted Quaintly Spoken Word
For Benjamin Franklin

Benjamin Franklin was always very keen about the correct spelling of words, and he used to maintain that the best story of him had spelling concerned a letter which ran: "Not finding bread in his delivery, you may say to his 'y'." Mrs. Deborah Franklin, even could not interpret this, so they appealed for aid to the typewriter, who promptly replied: "Y shall write, who promiscuously can it spell?"

French Indo-China produced more rubber last year than in 1931.

Pleasure that isn't shared with an other loses half its power to please.

Minister of Finance Acheson
For \$100,000,000 Issue

A huge refunding and conversion loan, amounting possibly to \$100,000,000 will be launched within the next few months, it was learned when a note of a resolution seeking parliamentary authority was given by Hon. E. N. Rhodes, Minister of Finance.

The resolution asks authority for an issue of a maximum of \$100,000,000 and it is understood the issue will be for a very large portion of the maximum.

The rate of interest will depend entirely upon the market at the time of the issue, which will be late in the summer, but it is expected the government will seek the lowest possible rate. The general belief is that the issue will be sold to yield slightly more than four per cent.

Easy For the Maid
Interpreted Quaintly Spoken Word
For Benjamin Franklin

Benjamin Franklin was always very keen about the correct spelling of words, and he used to maintain that the best story of him had spelling concerned a letter which ran: "Not finding bread in his delivery, you may say to his 'y'." Mrs. Deborah Franklin, even could not interpret this, so they appealed for aid to the typewriter, who promptly replied: "Y shall write, who promiscuously can it spell?"

French Indo-China produced more rubber last year than in 1931.

Pleasure that isn't shared with an other loses half its power to please.

A Forestry Policy

Saskatchewan Taking Steps To Deal With Drought Conditions

Hon. J. P. Bryant, K.C., Chairman of the Saskatchewan Commission on Conservation and Afforestation, addressed the Canadian Forestry Congress recently, when he made many interesting statements regarding the work of the Commission and the development of forestry work by the Government of Saskatchewan.

A portion of Mr. Bryant's speech is reproduced as follows:

In the year 1868, the late Archibald McLean, who was thoroughly familiar with this Western country, and of that section of Saskatchewan south of a line drawn from the intersection of the Manitoba boundary and the International boundary, was a Kerr, in a descriptive work of Western Canada. "Here," he said,

In 1868, Major Emory of the United States Frontier Commission, stated in a report to the United States Government, "The plains of America are not capable of supporting an agricultural population unless you have a large enough south to meet the tropical rains." The one-hundredth Meridian passes roughly through Brandon and a little to the east of Regina. When this was established, the western boundary of Manitoba was placed where it became it was then thought was the least desirable place for settlement.

Experience during the last twenty-five years indicates that these statements are not correct and that the western boundary of Manitoba was placed where it became it was then thought was the least desirable place for settlement.

Science must be brought to the assistance of our farmers and the only way in which we can successfully protect our land from drought is by acquiring accurate knowledge of climatic conditions. We must first get the facts on which the laws of nature are predicated, and in this scientific work the most have been hampered by lack of records that are wide-spread, accurate and maintained through the years. To study these facts the Saskatchewan Commission was formed and at the request of the Saskatchewan Commission, Drought Commission has recently been appointed in Manitoba and Alberta. It through an accurately be predicted, and we believe this can be done, millions of dollars can be saved in the long run in areas where there is no hope of success in given years.

Is Perjury On Increase?

Canadian Judges Hold Different Views On This Subject

Two Canadian judges took occasion recently to discuss the subject of perjury in the courts. The opinion has been prevalent for some time that the making of false statements under oath is on the increase. This view is supported by Justice McCallister of the Alberta Court of Appeals. He declared in an address that the amount of perjury that is going on in the courts has made a strong impression on him. He found that an oath had not the sanctity which it once had; the fear of eternal damnation for the sin has largely disappeared. When on the bench a few years ago, His Honor the Lieutenant-Governor visited similar alarm over the extent of false swearing in the courts.

Judge McCallister of Kent County, Ontario, takes an opposite view. He has been quoted by the Border Cities Star as saying that only three out of every hundred witnesses are deliberate liars. He asserts that what often makes the law description is only to prevent the perjurer from being detected and not an intention to deceive.

A great deal of what is so optimistic opinion because it does not coincide with that of a great many other judges. However, it is serious enough to make the law description is only to prevent the perjurer from being detected and not an intention to deceive.

Why People Watch Market

Increase in Wheat Price Means Additional Spending Power

There is a definite and practical reason why those interested in the betterment of conditions in Canada have been watching the wheat markets very closely. Canada has in storage at the present time some \$22,000,000 bushels of wheat, grain which has yet to find its way to the markets. The growers have received their advance payments on this wheat, but the final price they will obtain depends on the price at which it is finally sold.

In the last few weeks the price of wheat has risen to a point where there is reason to hope for further advances. On the basis of the present holdings of \$22,000,000 bushels of wheat, the advance means an increase in value of \$22,000,000, which will go directly to the pockets of the farmers, who grow the wheat. This means money for them, additional spending power, which will, when it becomes available, be used for the purchase of trade and business activities all over Canada.

With the cash value of Canada's holdings going up by over \$2,000,000 with every cent of increase in price, it is little wonder that there has been a corresponding increase in wheat markets with great interest—Oshawa Times.

Royal Barge Suggested For Bridge Opening

Proposal That Prince of Wales Use Vessel At Ceremony

Three new bridges, which have been placed across the upper reaches of the Thames, will be formally opened by the Prince of Wales in the early part of the summer, they are Hampton Court, Twickenham and Chiswick.

A proposal is under consideration that the Prince shall pass along a stretch of the Thames in the royal barge. This venture is rarely seen. Some years ago the King and Queen used it for a state progress along the Thames, but this function has never been repeated.

The bridge at Hampton Court, which is almost a mile in length, is the largest of the three. It is a bridge of the old iron-bridge structure. Designed by Sir Edward Lutyens, the new bridge is in three spans, the arches are of reinforced concrete. The bridges are faced partly with Portland stone and partly with brick. The brick is of a reddish-brown color, the same as the great Tudor Palace, a few hundred yards away, and also with the brick of the old court house, where Sir Christopher Wren lived and died.

Mining Activities In North

Only White Trapper In Go's Lake Area Makes New Discovery

Go's Lake, a small bit of rock at the southern tip of Elk Island, Go's Lake, Manitoba, will be a hive of mining activity this summer. Machinery has been down to the property and drillers are now on the location. Three shafts will be sunk.

In other parts of the district crews are assembling for a season of work which, it is expected, will bring this area into production, another big development in the Hudson Bay region.

The discovery of a new mine is said to be of importance, has been made by the only white trapper in the district, known as the Victorian, 14 miles from Go's Lake. The claims already have been staked.

Swans Donated To Elk Lake Sanctuary At Victoria

Arching their long necks as they glide over the waters of the Elk Lake bird sanctuary, 20 magnificent white swans imported from the Netherlands, a beautiful sight to rapt onlookers at Victoria, B.C. The birds arrived recently, raising the number of swans now in the sanctuary to 90.

The swans were donated to the park by the Ancient Guild on the Thames, known as the Victorian and Dyers Companies. The King is the only other person permitted to own swans in the Thames Four and the swans, but the swans are in good health.

CHAPTER 3—Continued.
"That probably means he went southward," Alan remarked, and his short laugh was not pleasant. "You be natural and easy-like, but it won't get by with us. We've nailed too many liars in our time. I want to know who this party of yours is, where they came from, how they got into this country, how they know their way about in it. I want to know who that pack of other pets got into Trader MacMillan's store shed. I want to know the man who killed Jimmy Montgomery there on the 'Midnight Sun.' Now get busy."

He clicked the safety on his automatic and brought his elbow up against his side. Chink Woolley trembled, his knees shook, he wilted. He guessed that this man must be the Baker fellow, he seemed terrible, while Mett Anderson always mentioned in lowered voice. Those hypnotic gray eyes seemed to be boring through him. That heavy automatic was tilted to make him feel the heat. And if he turned king's evidence, he might escape the noose.

It was a strange story that Alan and Bill listened to, there on the island in the heart of Many Waters. Eighteen months ago, on a whaler in Desautel sea, the five whites, including the half-breed Andrew whom they picked up later, had "run a buck" under Jensen's leadership, but were overpowered by the captain and rest of the crew. Fling ashore with the skipper's plundered good wishes at black Demarcation Point on the Arctic coast, they made their way across the Romanoff's to the new placer fields in the Koryukuk headwaters. They came too late to get worthwhile claims; and they discovered, too, that "hawking" in the personally-owned placer was even harder work than whaling.

It was Jensen, brooding over their predicament, who conceived the idea that it was easier to find gold when already had been found than to thaw a hole thirty feet down to black sand and bedrock and then maybe get nothing. It was Jensen who alleviated their fears and dashed the golden lure in front of their eyes till their mouths watered and they were ready for anything he planned.

Andrew the half-breed was a find. He fitted into the party like a key into a lock. They were scarcely ignorant of the country; they were tyros when it came to travelling, but living in the bush, that Andrew the freed was bush-wise as a weasel and water-wise as a muskrat mink, and he knew the whole north country from Hava Way come to Point Barrow as he knew the palm of his hand.

It was Andrew who had brought the party into this strange country, by back rivers and untraversed trails, avoiding all sight of men, so that they seemed to have dropped from the sky. It was Andrew who suggested the place of attack on the "Midnight Sun," and that the "Atahaz" as a place to hide in after the swoop and robbery. And it was "broad Andrew's sharp-speaking Savage" that drilled Jimmy Montgomery through the heart.

Alan Baker breathed a little harshly. He ordered, "Describe that 'broad.' And he added, 'So there will be no mistake when I meet him.'"

Woolley described his met confederate. Alan nodded curtly. After a few moments silence, he spoke again. "Now about Trader MacMillan. How did that pack of furs get in his shed?"

"I mean put it there."

Woolley did not know all the details of this Jensen business. He had been able to place the story together pretty well. Several years ago at Herschel Island, that gathering place for whalers, Indians, traders, Eskimos and Arctic explorers, Jensen had run afoul of that MacMillan. He had come ashore from a whaler, hungry for drink and hungry for women's company after eight months of following the herds. He had found the drink, and in a whiskey haze had started to make rough love to fifteen-year-old Joyce MacMillan.

Dave MacMillan fell upon him. For years now Jensen had been nursing his hairy chin remissly where MacMillan's hand that had caught him, and his ears still rang with the derisive jeers of those who saw him dog-woman across the snow and under the shingle to the whaler.

He had never forgotten the MacMillan girl nor the incident of that money October day. The incident had smoldered in his vengeful soul; and when his party passed the trading post, he had counted on the trader discovering them, wondering about them, innocently calling the attention of the police to them, and getting into hot water when he failed to explain how they got there.

The revelation of Dave MacMillan's complete innocence was no surprise to Alan but merely a proof that his and Joyce's instinctive belief had been correct. Now he could count on that in buying out of service he had saved the reputation and possibly the very life of Joyce's father. Under Haskell's tyranny he could never have vindicated Dave. In his own way he had planned, and had fought through to the end.

Writing down the essential points of this confession, he forced Woolley to make a note on the paper, with Alan and Bill as witnesses. He made a second copy for Bill, in case something happened to him or him. Then he demanded of Woolley: "You say those other men went hunting. When are you expecting them back?"

Woolley did not know. He seemed strangely hesitant. Fidgeting uneasily he would glance up at Alan and then away, as though he had something to tell but was afraid to tell it.

Alan saw his agitation. He demanded: "What are you stumbling over? Cooking up some lie?"

The man wetted his lips twice before he spoke. "You'll not kill me if I tell you the truth," where did you want to go? He can get back here on the Alaska in time to save the girl." Alan jerked as though a bullet had sung past his throat. His face went suddenly pale. "You mean Joyce MacMillan? What about her?"

"Tell it, or by G—d I'll choke it out of you! Open up. What about her?"

"What you want to do to me?" "You'll not kill me if you tell."

Woolley stammered: "They went down to Alaska to get her. It's Jensen's idea. He's similar to take her along on a escape and keep her for himself. He's all burnt about that girl."

His shaky voice trailed off. He shrank back in quivering dread from the expression that had come into Baker's eyes.

For a little while, a few moments only, Alan stared unseeingly out across the waters of the great lake. To wait here, until the bandits came back? Not that; they'd be three days and nights on the return trip.

Alan Baker breathed a little harshly. He ordered, "Describe that 'broad.' And he added, 'So there will be no mistake when I meet him.'"

Woolley described his met confederate. Alan nodded curtly. After a few moments silence, he spoke again. "Now about Trader MacMillan. How did that pack of furs get in his shed?"

Dave MacMillan fell upon him. For years now Jensen had been nursing his hairy chin remissly where MacMillan's hand that had caught him, and his ears still rang with the derisive jeers of those who saw him dog-woman across the snow and under the shingle to the whaler.

He had never forgotten the MacMillan girl nor the incident of that money October day. The incident had smoldered in his vengeful soul; and when his party passed the trading post, he had counted on the trader discovering them, wondering about them, innocently calling the attention of the police to them, and getting into hot water when he failed to explain how they got there.

The revelation of Dave MacMillan's complete innocence was no surprise to Alan but merely a proof that his and Joyce's instinctive belief had been correct. Now he could count on that in buying out of service he had saved the reputation and possibly the very life of Joyce's father. Under Haskell's tyranny he could never have vindicated Dave. In his own way he had planned, and had fought through to the end.

Writing down the essential points of this confession, he forced Woolley to make a note on the paper, with Alan and Bill as witnesses. He made a second copy for Bill, in case something happened to him or him. Then he demanded of Woolley: "You say those other men went hunting. When are you expecting them back?"

Woolley did not know. He seemed strangely hesitant. Fidgeting uneasily he would glance up at Alan and then away, as though he had something to tell but was afraid to tell it.

Alan Baker breathed a little harshly. He ordered, "Describe that 'broad.' And he added, 'So there will be no mistake when I meet him.'"

Woolley described his met confederate. Alan nodded curtly. After a few moments silence, he spoke again. "Now about Trader MacMillan. How did that pack of furs get in his shed?"

"I mean put it there."

Woolley did not know all the details of this Jensen business. He had been able to place the story together pretty well. Several years ago at Herschel Island, that gathering place for whalers, Indians, traders, Eskimos and Arctic explorers, Jensen had run afoul of that MacMillan. He had come ashore from a whaler, hungry for drink and hungry for women's company after eight months of following the herds. He had found the drink, and in a whiskey haze had started to make rough love to fifteen-year-old Joyce MacMillan.

Dave MacMillan fell upon him. For years now Jensen had been nursing his hairy chin remissly where MacMillan's hand that had caught him, and his ears still rang with the derisive jeers of those who saw him dog-woman across the snow and under the shingle to the whaler.

The incident had smoldered in his vengeful soul; and when his party passed the trading post, he had counted on the trader discovering them, wondering about them, innocently calling the attention of the police to them, and getting into hot water when he failed to explain how they got there.

The revelation of Dave MacMillan's complete innocence was no surprise to Alan but merely a proof that his and Joyce's instinctive belief had been correct. Now he could count on that in buying out of service he had saved the reputation and possibly the very life of Joyce's father. Under Haskell's tyranny he could never have vindicated Dave. In his own way he had planned, and had fought through to the end.

Writing down the essential points of this confession, he forced Woolley to make a note on the paper, with Alan and Bill as witnesses. He made a second copy for Bill, in case something happened to him or him. Then he demanded of Woolley: "You say those other men went hunting. When are you expecting them back?"

Woolley did not know. He seemed strangely hesitant. Fidgeting uneasily he would glance up at Alan and then away, as though he had something to tell but was afraid to tell it.

Alan saw his agitation. He demanded: "What are you stumbling over? Cooking up some lie?"

The man wetted his lips twice before he spoke. "You'll not kill me if I tell you the truth," where did you want to go? He can get back here on the Alaska in time to save the girl." Alan jerked as though a bullet had sung past his throat. His face went suddenly pale. "You mean Joyce MacMillan? What about her?"

"Tell it, or by G—d I'll choke it out of you! Open up. What about her?"

"What you want to do to me?" "You'll not kill me if you tell."

"What you want to do to me?" "You'll not kill me if you tell."

Woolley stammered: "They went down to Alaska to get her. It's Jensen's idea. He's similar to take her along on a escape and keep her for himself. He's all burnt about that girl."

His shaky voice trailed off. He shrank back in quivering dread from the expression that had come into Baker's eyes.

For a little while, a few moments only, Alan stared unseeingly out across the waters of the great lake. To wait here, until the bandits came back? Not that; they'd be three days and nights on the return trip.

Alan Baker breathed a little harshly. He ordered, "Describe that 'broad.' And he added, 'So there will be no mistake when I meet him.'"

Woolley described his met confederate. Alan nodded curtly. After a few moments silence, he spoke again. "Now about Trader MacMillan. How did that pack of furs get in his shed?"

"I mean put it there."

Little Helps For This Week

"Whosoever he findeth to do with it might," Ecclesiastes 9:10.
"For even the Son of Man came not to be ministered unto, but to minister."—Mark 9:45.
A child's kites
Set on thy sighing lips shall make thee glad;
A poor man served by thee shall long have thee rich;
A sick man helped by thee shall make thee strong;
Thou shalt be served thereby by every man.
Of service which thou renderest.

—E. B. Browning.
A man is relieved and gay when he has put his heart into his work and done his best; but who has his said or done otherwise shall give him no peace.—R. W. Emerson.
Be diligent after thy power to do deeds of love. Think nothing too little, nothing too low, to do for the sake of God. Vitis, if thou mayest, the sick, relieve the poor; forgo thyself and thine own ways for love; and He whom in those thou lovest, to whom in those thou ministerest, will own thy love and will pour His own love into thee.—E. R. Rieu.

Canadian Standard Measures
Though frequently used in Canada, there are certain standards of weights and measures in vogue in some of the United States that are illegal in the Dominion. The United States pint, quart, and gallon, for instance, are 16.6 per cent less in capacity than the Canadian (Imperial) legal standards.

Insects To Save Oak Tree
Parasites have been commissioned to save three 60-year-old oak trees in St. Mary's churchyard at New Plymouth, N.Z. They have been attacked by a pest known as the oak saw. Scientists of Cawthron Institute supplied the insects placed in a special container, which has been fastened to the trees, and the battle is on.

End POT—Improve FOOD FLAVOR!
CANADIAN
Cookery Parchment
brings better, easier, cheaper cooking. Confirms editors. Holds full flavors of meats, fish and vegetables. Keeps ingredients. End sheet can be used over and over. All dealers, or write direct to:

Interesting Local Items

The federal house prorogued last Saturday after passing the Redistribution bill.

Word was received in town last week announcing the marriage of Miss Grace Jean Cockerill formerly of Redcliff, to Mr. Albert Kling at Los Angeles, California.

Mr. Geo Menaris, of the glass plant office staff, was taken suddenly ill last Monday. He was taken to the hospital where it was found he was suffering from appendicitis. An operation was performed Monday evening and George is now progressing favorably.

The Chicago "Century of Progress Exposition", opened last week-end. The Dominion government, C. P. R. and C. N. R. have a joint exhibit the back ground of which will be a map of Canada 30x130 feet upon which 750 pounds of color were used. The map is one of the largest ever made.
